

MVC

1 Getting Started

- A Quick Introduction to ASP.NET MVC
- ASP.NET MVC 5 Overview
- Installing MVC 5 and Creating Applications
- The MVC Application Structure

2 Controllers

- The Controller's Role
- A Sample Application: The MVC Music Store
- Controller Basics

3 Views

- The Purpose of Views
- View Basics
- Understanding View Conventions
- Strongly Typed Views
- View Models
- Adding a View
- The Razor View Engine
- Specifying a Partial View

4 Models

- Modeling the Music Store
- Scaffolding a Store Manager
- Editing an Album

Model Binding

5 Forms and HTML Helpers

Using Forms

HTML Helpers

Other Input Helpers

Rendering Helpers

6 Data Annotations and Validation

Annotating Orders for Validation

Custom Validation Logic

Display and Edit Annotations

7 Membership, Authorization, and Security

Security: Not fun, But Incredibly Important

Using the Authorize Attribute to Require Login

Using AuthorizeAttribute to Require Role Membership

Extending User Identity

External Login via OAuth and OpenID

Understanding the Security Vectors in a Web Application

Proper Error Reporting and the Stack Trace

Security Recap and Helpful Resources

8 Ajax

jQuery

Ajax Helpers

Client Validation

Beyond Helpers

Improving Ajax Performance

9 Routing

Uniform Resource Locators

Introduction to Routing

Inside Routing: How Routes Generate URLs

Inside Routing: How Routes Tie Your URL to an Action

Custom Route Constraints

Using Routing with Web Forms

10 NuGet

Introduction to NuGet

Adding a Library as a Package

Creating Packages

Publishing Packages
